Summary

Full Stack Developer who built and shipped **10+ production websites** for real-world clients using React, Node.js, Express.js, and MongoDB. Experienced in converting requirements and designs into **responsive, production-ready features**, building REST APIs, debugging live applications, and deploying features through GitHub-based workflows.

Technical Skills

Languages: C++, JavaScript (ES6+), TypeScript

Frontend: React.js, Next.js, React Router, Redux Toolkit, HTML5, CSS3, Tailwind CSS, Framer Motion, Axios, Responsive Design, Figma

Backend: Node.js, Express.js, REST APIs, Microservices API Design, MongoDB, Mongoose, Multer

DevOps: Git, GitHub, GitHub Actions, CI/CD, VPS Deployment, Webhooks, Vercel

Tools: Postman, Debugging, Cross browser Testing, Performance Optimization

Experience

Full Stack Developer (Training)

Jul 2026 – Present

Sheryians Coding School

Bhopal, India

- Selected for the **4 month KODR Full Stack Development Bootcamp**, developing full stack features using React, TypeScript, and Node.js alongside Git and DevOps practices.
- Developing scalable application architecture and **REST API, database, and system design** as part of real-world full stack development.
- Lead development of a **real world capstone application**, including CI/CD based deployment, peer code reviews, and pair programming.

Full Stack Developer

Jul 2024 – Jun 2026

Self Employed, Freelance

Remote

- Developed and shipped **10+ production websites** for automotive, industrial, and hospitality clients, taking features from development through deployment.
- Converted client requirements into **responsive, production-ready interfaces** using React.js, translating designs and functional requirements into working features.
- Built **REST APIs and full stack features** using React, Node.js, Express.js, and MongoDB based on client requirements.
- Debugged live applications, performed **cross browser testing**, and optimized frontend performance, improving average page load speed by **up to 35%**.
- Deployed and maintained live applications across devices, resolving production issues and ensuring reliable user experiences.

Projects

AirLock Developer Tool

Node.js, TypeScript, GitHub API, Webhooks

- Built a production ready CLI connecting GitHub repositories to VPS infrastructure, automating **GitHub OAuth authorization, webhook creation, and deployment configuration** through a single command.
- Automated **CI/CD deployment workflows**, reducing deployment time by approximately **30%**.
- Implemented **GitHub webhook verification** before triggering deployments and tested the complete deployment pipeline end to end.

AgriSmart AI Farming Assistant [Live]

React 19, Node.js, Express 5, MongoDB Atlas, Groq Llama, Axios, Multer

- Engineered an **AI powered farming assistant** providing **24/7 agronomy guidance in 8 Indian languages**, with a React frontend consuming an Express REST API through Axios.
- Designed microservices for **chat, diagnosis, and price prediction** using Groq Llama and MongoDB Atlas, with Multer-based image uploads for plant disease identification.
- Integrated government mandi prices, AI price prediction, and NASA/Sentinel 2 satellite NDVI monitoring; selected as the **#1 Final Year Project** in the college cohort.

Achievements

- HackVerse Winner** Won HackVerse, a hackathon by KODR Bootcamp and Sheryians Coding School, for Problem Statement 01 "From Code to Production" with AirLock.
- Top 15 Team** Selected in the **Top 15 out of 100+ teams** at the Claude Code Build Day – Fable 5.1 hackathon held in Bhopal, hosted as part of Claude Community Events.

Education

Bachelor of Computer Applications (BCA)

Aug 2023 – Jun 2026

CGPA: 7.27
